Q1 2026 Highlights

- **Higher sales (+8.4%)** led by volumes with lower prices reflecting the overall lower market pricing and weaker farmer purchasing power
- **Higher Gross Profit (+8.3%)**
- **Lower EBITDA** due to less favorable mix than expected which could not fully support the higher OPEX (FX, salary, logistics & expenses in support of sales growth)
- **Lower financial expenses** due to favorable CPI and improved debt profile
- **Higher Reported & Adjusted Net Income**
- **Crop Protection Industry:**
  - Geopolitical tensions creating market volatilities that could prove transitory or structural as events unfold; higher oil prices posing potential inflationary pressure on the market and potentially pressuring farmer profitability
  - Volumes expected to remain stable after growth achieved in market in 2025
  - Prices remain under pressure as raw materials prices still remain at low levels due to structural over capacity
  - Farmer income is expected to remain pressured and uncertain due to geopolitical impacts both on commodity prices and famer costs

Adjusted vs. Reported Financial Results

The financial results in this presentation are presented on an “Adjusted” basis, and differ to some extent from the “Reported” financials contained in the formal financial statements of the Company.

ADAMA’s approach on the use of adjustments:

- Adjusted results:
  - Exclude **items that are of a one-time or non-cash/non-operational nature that do not impact the ongoing performance of the business**
  - Reflect the way the Company’s management and the Board of Directors view the performance of the Company internally
- The Company believes that **excluding the effects of these items from its operating results allows management and investors to effectively compare the true underlying financial performance of its business from period to period and against its global peers**
